ROCKBOND REPAIR CONCRETE**DESCRIPTION:**

ROCKBOND REPAIR CONCRETE (RB RC) powder is a specially formulated, pre-mixed, ready to use, cementitious concrete powder. The compound contains a blend of fine cements, high quality graded crushed rock sands and aggregates and a set of compatible admixtures. The material readily mixes with water to produce a flowing repair concrete which is self compacting and hardens to give a strong bonding, high strength product. The powder is packaged in 25kg moisture proof, durable bags and has a shelf life of 5 years.

SPECIAL PROPERTIES:

- * Designed to the Department of Transport Specification for Highway Works.
- * Quickly and easily mixed with water, poured, pumped and placed.
- * Flowing consistency promotes penetration into confined spaces, and into weak and damaged concrete substrates.
- * The concrete will not segregate or bleed at the recommended water content.
- * Shrinkage compensated, with low alkali cements, equivalent Na_2O below 3kg/m^3 .
- * Excellent bond strength, and good mechanical strengths.
- * Resistant to static, dynamic, cyclic and vibrational stresses.
- * Incorporates unreactive sands and aggregates safe from Alkali Silica Reaction (ASR).
- * High yielding, economical, non flammable, non toxic, odour free, user friendly and safe to use.

USES:

- For general purpose and high performance concreting applications.
- + Concrete repairs to reinforced concrete structures.
 - + Load bearing and structural applications.
 - + Motorway bridges, viaducts and carriageway repairs.
 - + Repair and protection of concrete structures in marine environments.
 - + To repair concrete floors, car parks, pathways, loading bays, roadways and motorways.
 - + Void filling and sealing applications to concrete, masonry and steel.

MIXING INSTRUCTIONS:

ROCKBOND REPAIR CONCRETE powder is mixed with water using a ROCKBOND CONCRETE STIRRER (RB CS), a pneumatic or electric power tool (1kW) and a ROCKBOND 25 LITRE MIXING CONTAINER (RB 25LMC). Use a ROCKBOND FORCED ACTION PAN MIXER (RB FAPM) to mix larger amounts of material.

Add 3.50 litres of water to the container or mixer.
Pour 25kg of powder onto the water while mixing.
For batches of 2 or more bags, repeat the procedure.
After all the powder has been added, mix for 30 seconds.
The concrete is now ready for use.

Alternatively, small amounts of the material can be prepared by slowly adding the powder to a quantity of water and mixing to the appropriate consistency.

ROCKBOND REPAIR CONCRETE (RB RC) CONTINUED...

APPLICATION PROCEDURE:

Careful and proper preparation of the concrete substrate is essential if a successful repair is to be carried out.

Thoroughly and completely abrade the surface where necessary to produce a sound substrate with a good mechanical key. All traces of contamination must be removed. Vacuum clean or blow away all dust and debris.

On weak, friable or porous substrates, use ROCKBOND PRIMER LATEX (RB PL) to penetrate, consolidate, strengthen and seal the surface. With a brush or a soft broom, brush the latex completely and evenly over the surface. Work the latex well into the substrate. Pay particular attention to the edges of the repair, and brush the liquid at least 25mm beyond the perimeter of the repair area. Let the latex dry out, usually 15 to 20 minutes depending on conditions.

To prime the substrate and to enhance the bond, apply a second coat of the latex to the first coat. Normally, 1 litre of the ROCKBOND PRIMER LATEX will treat 5m² of concrete surface with a two coat application.

Shutters must be impermeable to the passage of water, and strong enough to contain and support the concrete. Use ROCKBOND CURE (RB C) to seal and waterproof porous shutters. Sufficient hydrostatic head must be given to the material to enable it to flow completely through the void to be filled. Make sure enough concrete is mixed and available so that the operation can be performed in one continuous pour.

After concrete has set, or when the shutters are removed, any exposed concrete must be immediately cured with ROCKBOND CURE (RB C). Apply the curing agent at the rate of 10m²/litre. During adverse weather conditions, such as high temperatures and drying winds, repeat the procedure after the first coat is dry.

HEALTH, SAFETY AND STORAGE:

ROCKBOND REPAIR CONCRETE powder is non toxic and safe to use. However, use the same precautions as with any cementitious product: wear goggles, protective clothing and a dust mask while mixing and applying the material. Consult the relevant MSDS for further details. Store in a cool, dry, dark place.

TECHNICAL DATA:

TYPICAL DATA at 14% water/powder ratio at 20°C

CONSISTENCY: Flowing concrete
CONSISTENCY LIFE: 30 minutes

DENSITY: 2220kg/m³

MINIMUM COMPRESSIVE STRENGTH:

1	7	28	Days
20	40	60	MPa

YIELD: 25kg of powder yields 11.25 litres of Repair Concrete.
1m³ of Repair Concrete requires 2.225 tonnes of powder.
